

DPRK Strengthens Its Self-defensive Military Capabilities

The Democratic People's Republic of Korea is further strengthening its self-defensive military capabilities.

Reportedly, following a series of missile test fires this year, it conducted on May 17 another successful test fire of a tactical ballistic missile, which employed a new autonomous navigation system.

A tactical ballistic missile, which employed a new autonomous navigation system, blasts off in a test fire.

A newly-developed submarine-launched strategic cruise missile “Pulhwasal-3-31” is test-fired in January.
